Level Riser

Prosup Level Riser is designed to work with the Lap Top Dolly. It may be used as part of the Swivel Seat or upon its own as a corresponding item to the Euroboss, which is supplied with the Lap Top Dolly.

The Riser is adjusted by slackening the four levers on the riser slides and adjusting to the height required before re-clamping prior to use.

All items are precision made of Stainless Steel and Aircraft Spec. Aluminium. The bowl diameter is 100mm.

Swivel

The Prosup Swivel has been designed specifically to work with the Lap Top Dolly.

The unit is attached to the LapTop's Euroboss [supplied with the dolly].

The wheels under the seat pole absorb the weight of the operator whilst allowing easy circular movement around the Level Riser which supports the users pan & tilt head. The seat pole is easily adjusted by means of a lock lever. A convenient lever locks the rotation of the seat swivel to a static position.
